About Me

Since I wrote my first website I instantly knew that I love the freedom Web Development gives. One year ago my drive for becoming a Web Developer started and continues to this very moment, growing with each passing day. The never-ending challenge, that grants satisfaction and fulfillment is the core of my growing passion on each day. What started with simple curiosity, has become my daily routine, instead of reading games reviews, I read about new CSS tricks, search for JavaScript knowledge on MDN or look for a solution to a problem I can't get my mind over.

Below You will find the fruits of my growing passion that showcase the skills and map the road I have gone through.

Experience

REGEO - website   backup

Commercial website designed and created by myself, with the use of CSS Grid, FlexBox, MediaQueries, and raw JavaScript.
Website is a typical one-page, that uses JavaScript and CSS classes to emulate a multi-page Website, to increase the performance and reduce loading time.
Theme of the website is Geodesy. Regeo logo has been provided by the customer so I have created custom markers to adapt to the feeling of logo.

JANEX - website   backup

Commercial website, designed and created by myself, with extensive use of CSS Grid and FlexBox. Responsiveness has been provided with Media Queries and Grid. Similarly as with REGEO , JavaScript controls the display of elements with classes to mimic a multi-page website.
Almost all graphical elements, excluding the Zeus, have been created with SVG. God's image had to be converted to JPG to contain the size of the website in a reasonable weight.
Theme of the website is Poultry and Meat vendor, so it has been a challenge to come with a fitting design that is not chicken.
